The Acaje Mining Company is having difficulty processing its ore. Its present operations have the capacity of 300 tons per day. However, in order to reach this capacity the moisture must be reduced at least 45% and more if feasible. A 42" classifier will be used for dewatering purposes. The mill is processing chromite ore. When this additional equipment is in operation, it is expected that the moisture problems will be overcome and the plant can operate at its expected capacity. This equipment was shipped in the late
